1 HOUR RAPID UREASE TEST FOR THE DETECTION OF H. PYLORI

5 SIMPLE STEPS

1. Peel back label
2. Place biopsy on test
3. Re-seal test
4. Wait up to one hour
5. Read results

Red = positive
Yellow = negative
H. pylori is a major cause of diseases of the gastrointestinal tract. Eradication of the infection in individuals will improve symptoms including dyspepsia, gastritis and gastric ulcers, and may prevent gastric cancer. While there are several methods of detecting H. pylori, biopsy testing using rapid urease is considered to be the “Gold Standard” for detecting active H. pylori infections.

**COMPARISON TO OTHER DIAGNOSTIC METHODS:**

**CULTURE:**
- Much more expensive
- Not timely

**HISTOLOGY:**
- Accuracy depends on experience and appropriate stains
- Relatively expensive

**SEROLOGY**
- Does not define current H. pylori infection
- Less accurate than histology or Accutest H. pylori Urease Test

**ACCUTEST H. PYLORI UREASE TEST:**
- SIMPLE
- COST EFFECTIVE
- RESULTS IN 1 HOUR OR LESS
